

PARENT-CHILD INTERACTION THERAPY (PCIT)

A Parent & Caregiver Coaching Model for Young Children

ASK FOR IT BY NAME: PCIT

? What is PCIT?

Parent-Child Interaction Therapy teaches caregivers new ways to play and interact with children ages 2½ to 7.

Caregivers learn skills that decrease problem behaviors and lower their stress through weekly sessions and real-time coaching.

👤 Is PCIT right for my family?

PCIT helps you interact with children who show behaviors such as:

- Frequent temper tantrums
- Destructive behavior or aggression
- Not listening to adults or peers
- Difficulty playing with other children
- Problems sitting still

Families have experienced:

↓ REDUCED

- Tantrums and stress
- Aggression
- Therapy sessions after PCIT

↑ IMPROVED

- Relationships
- Ability to stay in control at home and in public
- Trust

Alex and Beth's Story

"Almost immediately, I knew it was working. Alex's reward wasn't candy, it was a connection. This therapy model is the single most helpful thing I learned."

Beth, foster parent

"I saw a difference after our first coaching session. Beth mastered the skills in just four weeks! I saw a change with Alex. He began to enjoy activities because he led them."

Therapist

"The PCIT model works! It gives you an opportunity to work with any caregiver of young children in a way that no other model allows. A caregiver can be an aunt, uncle, parent, foster parent, or grandparent." **Behavioral Health Provider**

What are EBPs?

EBPs or Evidence-Based Practices are treatments supported by research that have been proven to help people get better.

Why are EBPs important?

Just as doctor's offices look for the best treatments for physical health concerns, we want to do the same for behavioral and mental health concerns. EBP treatments help people with behavioral and mental health challenges get better.

Where can I find EBP providers?

Visit our website, DBHIDS.org/EPIC or call Member Services at 888-545-2600.
